## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## CLICK HERE for the Maryland College and Career Ready Standards for Grade 3 Mathematics.

## Topic 1: Understanding Multiplication and Division of Whole Numbers

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Operations Meanings and Relationships - There are multiple interpretations of multiplication and division. The lessons in Topics 1 and 2 present various multiplication and division situations. These situations can be used to help students understand that an operation can have various interpretations.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are the different meanings of multiplication and division?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Multiplication as <br> Repeated Addition | Some real-world problems that involve joining or separating equal groups or making comparisons can <br> be solved using multiplication. Repeated addition that involves joining equal groups is one way to <br> think about multiplication. | 3.OA.A.1 <br> 3.OA.A.3 |
| Multiplication on the <br> Number Line | Some real-world problems that involve joining or separating equal groups or making comparisons can <br> be solved using multiplication. Multiplication on the number line can involve joining equal groups and <br> is one way to think about multiplication. | 3.OA.A.1 <br> 3.OA.A.3 |
| Arrays and <br> Multiplication | Some real-world problems that involve joining or separating equal groups or making comparisons can <br> be solved using multiplication. An array involves displaying objects in equal rows and columns and is <br> one way to think about multiplication. | 3.OA.A.1 <br> 3.OA.A.3 |
| The Commutative <br> Property | Two numbers can be multiplied in any order and the product remains the same. | 3.OA.B.5 <br> 3.OA.A.3 |

| Division as Sharing | Sharing involves separating equal groups and is one way to think about division. | 3.OA.A.2 <br> $3 . O A . A .3$ |
| :--- | :--- | :--- |
| Division as Repeated <br> Subtraction | Some real-world problems that involve joining or separating equal groups or making comparisons can <br> be solved using multiplication and division. Repeated subtraction involves separating equal groups and <br> is one way to think about division. | 3.OA.A.2 <br> 3.OA.A.3 |
| Math Practices and <br> Problem Solving: Use <br> Appropriate Tools | Good math thinkers know how to pick the right tools to solve math problems. | MP.5 |

## HARFORD COUNTY PUBLIC SCHOOLS

 GRADE 3 MATHEMATICS CURRICULUM
## Topic 2: Multiplication Facts: Use Patterns

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Operations Meanings and Relationships - There are multiple interpretations of multiplication and division. The lessons in Topics 1 and 2 present various multiplication and division situations. These situations can be used to help students understand that an operation can have various interpretations.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can unknown multiplication facts be found using properties and patterns?

| Lesson Title | Lesson Overview | Standards |
| :---: | :---: | :---: |
| 2 and 5 as Factors | There are patterns in the products for multiplication with factors of 2 or 5. | $\begin{aligned} & \text { 3.OA.A. } 3 \\ & \text { 3.OA.A. } 1 \\ & \text { 3.OA.D. } 9 \end{aligned}$ |
| 9 as a Factor | There are patterns in the products for multiplication with factors of 9 . | $\begin{aligned} & \text { 3.OA.A. } 3 \\ & \text { 3.OA.A. } 1 \\ & \text { 3.OA.D. } 9 \end{aligned}$ |
| Apply Properties: <br> Multiply by 0 and 1 | There are patterns in the products for multiplication with factors of 0 or 1 . The product of 0 and any number is 0 . The product of 1 and any number is that same number. | $\begin{aligned} & \text { 3.OA.B. } 5 \\ & \text { 3.OA.A. } 3 \\ & \text { 3.OA.A. } 1 \\ & \text { 3.OA.D. } 9 \end{aligned}$ |
| Multiply by 10 | Patterns can be used to solve multiplication problems with a factor of 10. | $\begin{aligned} & \text { 3.OA.A. } 3 \\ & \text { 3.OA.A. } 1 \\ & \text { 3.OA.D. } 9 \end{aligned}$ |

| Multiplication Facts: 0,1, <br> $2,5,9$, and 10 | Basic multiplication facts can be found by identifying patterns. | 3.OA.A.3 |
| :--- | :--- | :--- |
| Math Practices and <br> Problem Solving: Model <br> with Math | Good math thinkers choose and apply math they know to show and solve problems from everyday <br> life. | MP. 4 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 3: Apply Properties: Multiplication Facts for 3, 4, 6, 7 \& 8

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Properties - For a given set of numbers there are relationships that are always true, called properties, and these are the rules that govern arithmetic and algebra. The Distributive Property, the Commutative Property of Multiplication, the Associative Property of Multiplication, and the properties or rules involving division by 0 and 1 are used in Topics 3 and 4 .
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can unknown multiplication facts be found using known facts?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| The Distributive Property | The Distributive Property can be used to break a large array into smaller arrays. | 3.OA.B.5 |
| Apply Properties: 3 as a Factor | Basic multiplication facts with 3 as a factor can be found by breaking apart the <br> unknown fact into known facts. The answers to the known facts are added to get the <br> final product. | 3.OA.B.5 <br> 3.OA.A.3 <br> 3.OA.D.9 |
| Apply Properties: 4 as a Factor | Basic multiplication facts with 4 as a factor can be found by breaking apart the <br> unknown fact into known facts. The answers to the known facts are added to get the <br> final product. | 3.OA.B.5 <br> 3.OA.A.3 <br> 3.OA.D.9 |
| Apply Properties: 6 and 7 as a Factor | Basic multiplication facts with 6 or 7 as a factor can be found by breaking apart the <br> unknown fact into known facts. The answers to the known facts are added to get the <br> final product. | 3.OA.B. <br> 3.OA.A.3 |
| Apply Properties: 8 as a Factor | Basic multiplication facts with 8 as a factor can be found by breaking apart the <br> unknown fact into known facts. The answers to the known facts are added to get the <br> final product. | 3.OA.B. |
| 3.OA.A.3 |  |  |
| 3.OA.D.9 |  |  |

| Practice Multiplication Facts | Strategies such as bar diagrams and arrays with known facts can be used to solve <br> multiplication problems. | 3.OA.B.5 <br> 3.OA.A.3 |
| :--- | :--- | :--- |
| The Associative Property: Multiply with 3 <br> Factors | Three or more numbers can be grouped and multiplied in any order. | 3.OA.B.5 |
| Math Practices and Problem Solving: <br> Repeated Reasoning | Good math thinkers look for things that repeat and then make generalizations. | MP.8 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 4: Use Multiplication to Divide: Division Facts

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Properties - For a given set of numbers there are relationships that are always true, called properties, and these are the rules that govern arithmetic and algebra. The Distributive Property, the Commutative Property of Multiplication, the Associative Property of Multiplication, and the properties or rules involving division by 0 and 1 are used in Topics 3 and 4 .
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can unknown division facts be found using known multiplication facts?

| Lesson Title Lesson Overview | Standards |  |
| :--- | :--- | :--- | :--- |
| Relate Multiplication and Division | Multiplication and division have an inverse relationship. | 3.OA.B.6 <br> 3.OA.A.3 |
| Use Multiplication to Divide with 2, 3, 4, <br> and 5 | The inverse relationship between multiplication and division can be used to find <br> division facts; every division fact has a related multiplication fact. | 3.OA.B.6 <br> 3.OA.A.3 |
| Use Multiplication to Divide with 6 and 7 | The inverse relationship between multiplication and division can be used to find <br> division facts; every division fact has a related multiplication fact. | 3.OA.B.6 <br> 3.OA.A.3 |
| Use Multiplication to Divide with 8 and 9 | The inverse relationship between multiplication and division can be used to find <br> division facts; every division fact has a related multiplication fact. | 3.OA.B.6 <br> 3.OA.A.3 |
| Multiplication Patterns: Even and Odd <br> Numbers | Factors and products can be identified by patterns as well as other characteristics, <br> such as even or odd. | 3.OA.D.9 <br> 3.OA.A.3 |
| Division Involving 0 and 1 | Any number (except 0 ) divided by itself is equal to 1. Any number divided by 1 is <br> that number. 0 divided by any number (except 0 ) is 0.0 cannot be a divisor. | 3.OA.B.5 <br> 3.OA.B.6 <br> 3.OA.A.3 |

## HARFORD COUNTY PUBLIC SCHOOLS

GRADE 3 MATHEMATICS CURRICULUM

| Practice Multiplication and Division Facts | Patterns and known facts can be used to find unknown multiplication facts. Division <br> facts can be found by thinking of a related multiplication fact. | 3.OA.B.6 <br> 3.OA.A.3 <br> 3.OA.A.4 |
| :--- | :--- | :--- |
| Solve Multiplication and Division <br> Equations | You can use a multiplication or division fact to find the unknown value in an <br> equation. | 3.OA.A.4 <br> 3.OA.A.3 |
| Math Practices and Problem Solving: <br> Make Sense and Persevere | Good math thinkers make sense of problems and think of ways to solve them. If <br> they get stuck, they don't give up. | MP.1 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 5: Fluently Multiply and Divide Within 100

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Basic Facts and Algorithms - Some strategies for basic facts and most algorithms for operations with rational numbers, both mental math and paper and pencil, use equivalence to transform calculations into simpler ones. More difficult products can be transformed into simpler ones by relating them to repeated addition or by breaking them apart into simpler ones.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are strategies to solve multiplication and division facts?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Patterns for Multiplication Facts | There are patterns in the factors and the products for multiplication facts. | 3.OA.D.9 <br> 3.OA.C.7 |
| Use a Multiplication Table | Any division problem can be thought of as a missing factor multiplication problem. | 3.OA.C.7 |
| Find Missing Numbers in a Multiplication <br> Table | Strategies and reasoning can be used to recall multiplication and division facts. | 3.OA.C.7 |
| Use Strategies to Multiply | Strategies such as using properties of operations, drawings, and skip counting can be <br> used to multiply. | 3.OA.C.7 <br> 3.OA.A.3 |
| Solve Word Problems: Multiplication and <br> Division Facts | Some real-world problems can be represented and solved using different <br> multiplication and division strategies. | 3.OA.C.7 <br> 3.OA.A.3 |
| Write Math Stories: Multiplication | Some real-world problems that involve equal groups can be solved using <br> multiplication. | 3.OA.C.7 <br> 3.OA.A.3 |
| Write Math Stories: Division | Some real-world problems that involve equal groups can be solved using division. | 3.OA.C.7 <br> 3.OA.A.3 |
| Math Practices and Problem Solving: <br> Look for and Use Structure | Good math thinkers look for relationships in math to help solve problems. | MP.7 |

## HARFORD COUNTY PUBLIC SCHOOLS

 GRADE 3 MATHEMATICS CURRICULUM
## Topic 6: Connect Area to Multiplication \& Addition

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Measurement - Some attributes of geometric objects are measurable and can be quantified using unit amounts.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can area be measured and found?

| Lesson Title | Lesson Overview | Standards |
| :---: | :---: | :---: |
| Cover Regions | The amount of space inside a shape is its area, and area can be found or estimated using unit squares. | $\begin{aligned} & \text { 3.MD.C.5a } \\ & \text { 3.MD.C.5b } \\ & \text { 3.MD.C. } 6 \end{aligned}$ |
| Area: Nonstandard Units | Area can be measured using nonstandard units, including unit squares of different sizes. | $\begin{aligned} & \text { 3.MD.C. } 6 \\ & \text { 3.MD.C.5a } \\ & \text { 3.MD.C.5b } \end{aligned}$ |
| Area: Standard Units | Standard measurement units are used for consistency in finding and communicating measurements. | $\begin{aligned} & \text { 3.MD.C. } 6 \\ & \text { 3.MD.C.5a } \\ & \text { 3.MD.C.5b } \end{aligned}$ |
| Area of Squares and Rectangles | The amount of space inside a region is its area, and area can be found by counting unit squares or by multiplying the side lengths. | $\begin{aligned} & \text { 3.MD.C.7a } \\ & \text { 3.MD.C.7b } \end{aligned}$ |
| Apply Properties: Area and the Distributive Property | The areas of rectangles can be used to model the Distributive Property. | 3.MD.C.7c |
| Apply Properties: Area of Irregular Shapes | The area of some irregular shapes can be found by dividing the original shape into rectangles, finding the area of each rectangle, and adding all of the areas. | 3.MD.C.7d |
| Math Practices and Problem Solving: Look for and Use Structure | Good math thinkers look for relationships in math to help solve problems. | MP. 7 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 7: Represent and Interpret Data

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Data Collection and Representation - Some questions can be answered by collecting and analyzing data, and the question to be answered determines the data that need to be collected and how best to collect the data. Data can be represented visually using tables, charts, and graphs. The type of data determines the best choice of visual representation. Students learn to read and make scaled picture graphs and scaled bar graphs, and then solve problems using the data that is represented. Students choose the scale to be used based on the data.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can data be represented, interpreted, and analyzed?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Read Picture Graphs and Bar Graphs | Certain types of graphs are appropriate for certain kinds of data. Picture graphs and <br> bar graphs make it easy to compare data. | 3.MD.B.3 <br> 3.OA.A.3 |
| Make Picture Graphs | The type of graph used is based on the data being presented. The key for a picture <br> graph determines the number of pictures needed to represent the data. | 3.MD.B.3 <br> 3.OA.A.3 |
| Make Bar Graphs | The type of graph used is based on the data being presented. In a scaled bar graph, <br> the scale determines how long each bar needs to be to represent every number in <br> the data set. | 3.MD.B.3 <br> 3.OA.A.3 |
| Solve Word Problems Using Information <br> in Graphs | Some problems can be solved by making, reading, and analyzing a graph. | 3.MD.B.3 <br> 3.OA.A.3 <br> 3.OA.D.8 |
| Math Practices and Problem Solving: <br> Precision | Good math thinkers are careful about what they write and say, so their ideas about <br> math are clear. | MP.6 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 8: Use Strategies and Properties to Add and Subtract

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Estimate Sums and Differences - Estimating sums and differences is a useful technique to quickly solve mathematical problems and understand the value of numbers used in real-world situations. There is more than one way to estimate sums and differences. In grade 3 , students round whole numbers to the nearest ten and the nearest hundred.
- Basic Facts and Algorithms - There is more than one algorithm for each of the operations with rational numbers. Some strategies for basic facts and most algorithms for operations with rational numbers, both mental math and paper and pencil, use equivalence to transform calculations into simpler ones.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Questions

- How can sums and differences be estimated and found mentally?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Addition Properties | Some real-world problems that involve joining, separating, part-part whole, or <br> comparing can be solved using addition. Two or more numbers can be added in <br> any order, and the sum of any number and 0 is that number. | 3.NBT.A.2 |
| Algebra: Addition Patterns | Generalizations about how addition works emerge from investigating patterns and <br> reasoning about mathematical relationships. | 3.OA.D.9 |
| Round Whole Numbers | Rounding is a process for finding multiples of 10 and 100 closest to a given <br> number. | 3.NBT.A.1 |
| Mental Math Addition | There is more than one way to do mental math. Techniques involve changing the <br> numbers or the expressions so that calculations are easy to do mentally. | 3.NBT.A.2 |
| Mental Math Subtraction | There is more than one way to do mental math. Techniques involve changing the <br> numbers or the expressions so that calculations are easy to do mentally. | 3.NBT.A.2 |

## HARFORD COUNTY PUBLIC SCHOOLS <br> GRADE 3 MATHEMATICS CURRICULUM

| Estimate Sums | There is more than one way to estimate a sum. Two ways to estimate are rounding <br> and using compatible numbers. | 3.NBT.A.2 |
| :--- | :--- | :--- |
| Estimate Differences | There is more than one way to estimate a difference. Two ways to estimate are <br> rounding and using compatible numbers. | 3.NBT.A.2 |
| Relate Addition and Subtraction | Addition and subtraction have an inverse relationship. That relationship can be <br> used to solve problems. | 3.NBT.A.2 |
| Math Practices and Problem Solving: <br> Model with Math | Good math thinkers choose and apply math they know to show and solve <br> problems from everyday life. | MP.4 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 9: Fluently Add and Subtract within 1,000

Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Estimate Sums and Differences - Estimating sums and differences is a useful technique to quickly solve mathematical problems and understand the value of numbers used in real-world situations. There is more than one way to estimate sums and differences. In grade 3, students round whole numbers to the nearest ten and the nearest hundred.
- Basic Facts and Algorithms - There is more than one algorithm for each of the operations with rational numbers. Some strategies for basic facts and most algorithms for operations with rational numbers, both mental math and paper and pencil, use equivalence to transform calculations into simpler ones.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are standard procedures for adding and subtracting whole numbers?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Use Partial Sums to Add | The expanded algorithm for adding 3-digit numbers breaks the addition problem into a series of easier <br> problems based on place value. Answers to the simpler problems are then used to find the final sum. | 3.NBT.A.2 |
| Add 3-Digit Numbers | The standard algorithm for adding 3-digit numbers is an extension to the standard algorithm for adding <br> 2-digit numbers. | 3.NBT.A.2 |
| Continue to Add 3-Digit <br> Numbers | The standard algorithm for adding 3-digit numbers is an extension to the standard algorithm for adding <br> 2-digit numbers. | 3.NBT.A.2 |
| Add 3 or More Numbers | The addition of adding three or more numbers is an extension of adding two numbers. | 3.NBT.A.2 |
| Use Partial Differences <br> to Subtract | The expanded algorithm for subtracting multi-digit numbers breaks a larger subtraction problem into a <br> series of easier problems based on place value. Answers to the simpler problems are then used to find <br> the final difference. | 3.NBT.A.2 |

| Subtract 3-Digit <br> Numbers | The standard algorithm for subtracting 3-digit numbers is an extension to the standard algorithm for <br> subtracting 2-digit numbers. | 3.NBT.A.2 |
| :--- | :--- | :--- |
| Continue to Subtract 3- <br> Digit Numbers | The standard algorithm for subtracting 3-digit numbers is an extension to the standard algorithm for <br> subtracting 2-digit numbers. | 3.NBT.A.2 |
| Math Practices and <br> Problem Solving: <br> Construct Arguments | Good math thinkers use math to explain why they are right. They can talk about the math that others <br> do, too. | MP.3 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 10: Multiply by Multiples of 10

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Basic Facts and Algorithms - There is more than one algorithm for each of the operations with rational numbers. Some strategies for basic facts and most algorithms for operations with rational numbers, both mental math and paper and pencil, use equivalence to transform calculations into simpler ones.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are ways to multiply by multiples of 10 ?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Use an Open Number Line to Multiply | An open number line can be used to find products when one factor is a multiple of <br> 10. | 3.NBT.A.3 |
| Use Properties to Multiply | Basic multiplication facts and properties of multiplication can be used to find <br> products when one factor is a multiple of 10. | 3.NBT.A.3 |
| Multiply by Multiples of 10 | Different strategies can be used to find products when one factor is a multiple of 10. | 3.NBT.A.3 |
| Math Practices and Problem Solving: <br> Look For and Use Structure | Good math thinkers look for relationships in math to help solve problems. | MP. 7 |

## HARFORD COUNTY PUBLIC SCHOOLS

 GRADE 3 MATHEMATICS CURRICULUM
## Topic 11: Use Operations with Whole Numbers to Solve Problems

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Variables, Expressions, Equations - Some mathematical and real-world situations can be represented using variables, expressions, and equations.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are ways to solve two-step problems?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Solve 2-Step Word Problems: Addition <br> and Subtraction | Bar diagrams show relationships in a two-step word problem and help identify the <br> operation or operations needed to solve the problem. | 3.OA.D.8 |
| Solve 2-Step Word Problems: <br> Multiplication and Division | Bar diagrams show relationships in a two-step word problem and help identify the <br> operation or operations needed to solve the problem. | 3.OA.D.8 |
| Solve 2-Step Word Problems: All <br> Operations | The way quantities in a two-step problem are related determines the operations used <br> to solve the problem. Equations show these relationships. | 3.OA.D.8 |
| Math Practices and Problem Solving: <br> Critique Reasoning | Good math thinkers use math to explain why they are right. They can talk about the <br> math that others do, too. | MP.3 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 12: Understand Fractions as Numbers

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Numbers - The set of real numbers is infinite and ordered. Whole numbers, integers, and fractions are real numbers. Each real number can be associated with a unique point on the number line.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are different interpretations of a fraction?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Divide Regions into Equal Parts | A unit fraction represents one part of a whole that has been divided into equal parts. <br> A fraction can represent multiple copies of a unit fraction. | 3.NF.A.1 <br> 3.G.A.2 |
| Fractions and Regions | A unit fraction represents one part of a whole that has been divided into equal parts. <br> A fraction can represent multiple copies of a unit fraction. | 3.NF.A.1 <br> 3.G.A.2 |
| Understand the Whole | The whole can be found given a fractional part. | 3.NF.A.3c <br> 3.NF.A.1 |
| Number Line: Fractions Less Than 1 | Points on a number line can represent fractions. The denominator represents the <br> number of equal parts between 0 and 1, and the numerator represents the number of <br> parts between 0 and the point. | 3.NF.A.2a <br> 3.NF.A.2b |
| Number Line: Fractions Greater Than 1 | A number line can be used to represent fractions greater than 1. | 3.NF.A.2b <br> 3.NF.A.2a |
| Line Plots and Length | A line plot is a way to organize data on a number line. | 3.MD.B.4 |
| More Line Plots and Length | A line plot is a way to organize data on a number line. | 3.MD.B.4 |
| Math Practices and Problem Solving: <br> Make Sense and Persevere | Good math thinkers make sense of problems and think of ways to solve them. If <br> they get stuck, they don't give up. | MP.1 |

HCPS Office of Mathematics

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 13: Fraction Equivalence and Comparison

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Numbers - The set of real numbers is infinite and ordered. Whole numbers, integers, and fractions are real numbers. Each real number can be associated with a unique point on the number line.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- What are different ways to compare fractions?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- | :--- |
| Equivalent Fractions: Use Models | The same fractional amount can be represented by an infinite set of different but <br> equivalent fractions. | 3.NF.A.3a <br> 3.NF.A.3b |
| Equivalent Fractions: Use the Number <br> Line | There are a limitless number of fraction names for each point on a number line. These <br> points can be used to name equivalent fractions. | 3.NF.A.3a <br> 3.NF.A.3b |
| Use Models to Compare Fractions: Same <br> Denominator | If two fractions have the same denominator, the fraction with the greater numerator is <br> the greater fraction. | 3.NF.A.3d |
| Use Models to Compare Fractions: Same <br> Numerator | If two fractions have the same numerator, the fraction with the greater denominator is <br> less than the other fraction. | 3.NF.A.3d |
| Compare Fractions: Use Benchmarks | Benchmark numbers such as $0,1 / 2$, and 1 can be used to compare fractions. | 3.NF.A.3d |
| Compare Fractions: Use the Number Line | You can use a number line to compare fractions. | 3.NF.A.3d |
| Whole Numbers and Fractions | Whole numbers can be represented by many different fraction names. | 3.NF.A.3c <br> 3.NF.A.3a |
| Math Practices and Problem Solving: <br> Construct Arguments | Good math thinkers use math to explain why they are right. They can talk about the <br> math that others do, too. | MP.3 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 14: Solve Time, Capacity and Mass Problems

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Measurement - Some attributes of objects are measurable and can be quantified using unit amounts. In grade 3, students work with time and elapsed time, liquid volume /capacity, and mass.
- Practices, Processes, and Proficiencies - Mathematics content and processes are applied to solve problems.

## Essential Question

- How can time, capacity, and mass be measured and found?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- |
| Time to the Minute | Clocks can be used to tell time to the nearest minute. | 3.MD.A.1 |
| Units of Time: Measure Elapsed Time | Elapsed time can be found by finding the total amount of time that passes between a <br> starting time and an ending time. | 3.MD.A.1 |
| Units of Time: Solve Word Problems | Time intervals can be added or subtracted to solve problems. | 3.MD.A.1 |
| Estimate Liquid Volume | Benchmarks can be used to estimate capacity (liquid volume). | 3.MD.A.2 |
| Measure Liquid Volume | Capacity (liquid volume) is a measure of the amount of liquid a container can hold. | 3.MD.A.2 |
| Estimate Mass | Mass is a measure of the quantity of matter in an object. | 3.MD.A.2 |
| Measure Mass | Mass is a measure of the quantity of matter in an object. | 3.MD.A.2 |
| Solve Word Problems Involving Mass and <br> Liquid Volume | Problems involving mass and volume can often be solved with a picture or a <br> diagram. | 3.MD.A.2 |
| Math Practices and Problem Solving: <br> Reasoning | Good math thinkers know how to think about words and numbers to solve problems. | MP.2 |

## HARFORD COUNTY PUBLIC SCHOOLS

 GRADE 3 MATHEMATICS CURRICULUM
## Topic 15: Attributes of Two-Dimensional Shapes

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Comparison and Relationships - Numbers, expressions, measures, and objects can be compared and related to other numbers, expressions, measures, and objects in different ways.
- Geometric Figures - Two- and three- dimensional objects with or without curved surfaces can be described, classified, and analyzed by their attributes. An object's location in space can be described quantitatively.

## Essential Question

- How can two-dimensional shapes be described, analyzed, and classified?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- |
| Describe Quadrilaterals | Quadrilaterals can be described and classified by their sides and angles. | 3.G.A.1 |
| Classify Shapes | Shapes can be classified by their attributes. | 3.G.A.1 |
| Analyze and Compare Quadrilaterals | Quadrilaterals can be classified by their attributes. | 3.G.A.1 |
| Math Practices and Problem Solving: <br> Precision | Good math thinkers are careful about what they write and say, so their ideas about <br> math are clear. | MP.6 |

## HARFORD COUNTY PUBLIC SCHOOLS GRADE 3 MATHEMATICS CURRICULUM

## Topic 16: Solve Perimeter Problems

## Primary Resource: enVisionmath2.0 Grade 3, Savvas Learning Company, 2016.

## Enduring Understandings

- Measurement - Some attributes of objects are measurable and can be quantified using unit amounts. For example, perimeter is the measure of the distance around a polygon, and it can be represented by the sum of the lengths of all its sides. Different shapes can have the same perimeter.

## Essential Question

- How can perimeter be measured and found?

| Lesson Title | Lesson Overview | Standards |
| :--- | :--- | :--- |
| Understand Perimeter | The distance around a figure is its perimeter. | 3.MD.D.8 |
| Perimeter of Common Shapes | To find the perimeter of a polygon, add the lengths of the sides. | 3.MD.D.8 |
| Perimeter and Unknown Side Lengths | To find the perimeter of a polygon, add the lengths of the sides. | 3.MD.D.8 |
| Same Perimeter, Different Area | Polygons with the same perimeter may have different areas. | 3.MD.D.8 <br> 3.MD.C.7b |
| Same Area, Different Perimeter | Polygons with the same area may have different perimeters. | 3.MD.D.8 <br> 3.MD.C.7b |
| Math Practices and Problem Solving: <br> Reasoning | Good math thinkers know how to think about words and numbers to solve <br> problems. | MP.2 |
