

Family Resources for Math 6/7A Unit 5: Proportional Relationships

Supporting Middle School Math Learning at Home

Middle school is a pivotal time in a child's mathematical journey. As concepts become more complex and abstract, students are also developing greater independence in how they learn. During this stage, the role of parents and caregivers is not to have all the answers, but to create an environment where effort, curiosity, and persistence are valued. With the right support, home can become a place where students build confidence, develop problem-solving skills, and strengthen their identity as capable math learners.

Ways to Support at Home

 Create Time & Space for Math Predictable routines build focus and responsibility.	 Ask Questions Guide with simple prompts like, "What is the problem asking you to find?"
 Focus on Understanding Shift from "getting it done" to "making sense of it."	 Support Organization Help with time management and making a plan for studying.
 Encourage Productive Struggle Give them time to try before stepping in.	 Stay Positive About Math Instead of:  "I was never good at math." Try:  "Let's figure this out together."
 Seek Help When Needed Reach out to teachers and use available resources like tutoring or school help sessions.	

A Supportive Partnership

The goal of helping with math at home is not perfection—it's progress. When parents and caregivers provide structure, encouragement, and a positive mindset, they help students take ownership of their learning. Over time, this builds not only stronger math skills, but also persistence, independence, and confidence that extend far beyond the classroom.

Strategies for Learning Mathematics

For additional information and resources to support at home, please visit the [Office of Mathematics website](#).

Big Ideas in Unit 5

Within this unit, students will learn these big ideas:

- Representing Proportional Relationships with Equations
- Comparing Proportional and Nonproportional Relationships
- Representing Proportional Relationships with Graphs
- Circumference of a Circle
- Area of a Circle

For more details about this unit, see [Unit 5 Family Resources](#).

Lesson Specific Resources

Use the links below to learn about the learning from each lesson.

Lesson Link
<u>5.1 Proportional Relationships and Equations</u>
<u>5.2 Two Equations for Each Relationship</u>
<u>5.3 Writing Equations to Represent Relationships</u>
<u>5.4 Comparing Relationships with Tables</u>
<u>5.5 Comparing Relationships with Equations</u>
<u>5.6 Solving Problems about Proportional Relationships</u>
<u>5.7 Graphs of Proportional Relationships</u>
<u>5.8 Using Graphs to Compare Relationships</u>
<u>5.9 Two Graphs for Each Relationship</u>
<u>5.10 How Well Can You Measure?</u>
<u>5.11 Exploring Circles</u>
<u>5.12 Exploring Circumference</u>
<u>5.13 Applying Circumference</u>
<u>5.14 Estimating Areas</u>
<u>5.15 Area of a Circle.</u>
<u>5.16 Applying Area of Circles</u>
<u>5.18 Using Water Efficiently</u>
